Control Structures: if

```
if(<condition>) {
         ## do something
} else {
         ## do something else
}
if(<condition1>) {
         ## do something
} else if(<condition2>) {
         ## do something different
} else {
         ## do something different
}
```

if

This is a valid if/else structure.

```
if(x > 3) {
      y <- 10
} else {
      y <- 0
}</pre>
```

So is this one.

```
y <- if(x > 3) {
      10
} else {
      0
}
```

if

Of course, the else clause is not necessary.

```
if(<condition1>) {

}

if(<condition2>) {
}
```
